Abstract (Basic): JP 6092704 A

A mixture for concrete is composed of (1) a copolymer or its metallic salt, which is obtd. by copolymerising monomer (A) and monomer (B) where (A) is polyalkylene glycolmonoester system monomer having unsatd. bond, and (B) is acrylic monomer and/or unsatd. dicarboxylic acid system monomer; (2) polyethylene glycol of average molecular wt. at 5000-100000; and (3) one or more of hydroxy carboxylic acid or its salt, sugar and sugar alcohol. The admixture is blended into cement mixt. of water/cement ratio or less than 30 wt.%.  
USE/ADVANTAGE - Used for producing concrete of super-high strength. fluidity and viscosity of concrete are improved.
